

Project Design Phase-I Solution Architecture

Date	19 September 2022
Team ID	PNT2022TMID08566
Project Name	Efficient Water Quality Analysis & Prediction Using Machine Learning
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
 - Describe the structure, characteristics, behaviour, and other aspects of the software to project stakeholders.
 - Define features, development phases, and solution requirements.
 - Provide specifications according to which the solution is defined, managed, and delivered.
-
- **Efficient Water Quality Analysis & Prediction Using Machine Learning**
